ConvoCarry AI — Local-Only Trusted Tester Beta Checklist

1. Main Goal

Launch **ConvoCarry AI** as a **Chrome Web Store trusted tester beta** with a safe, privacy-first, local-only feature set.

The goal of this phase is not to launch the full paid SaaS yet. The goal is to get the extension approved, tested by real users, and validated before enabling Cloud Sync, Account Handoff, MCP, OAuth, and Stripe.

---

2. Current Launch Strategy

Selected Strategy

Local-only trusted tester beta first.

Why This Strategy Was Chosen

- Faster Chrome Web Store review path.
- Lower privacy and permission risk.
- No production backend dependency.
- No OAuth dependency.
- No Stripe/payment risk.
- Easier for reviewers to test.
- Allows real users to test the core workflow first.

Current Beta Positioning

ConvoCarry AI lets users capture loaded AI chat context into reusable Carry Cards and reuse that context through structured injection or copy fallback.

---

3. Features Included in Current Beta

Enabled Features

- Local Free mode.
- No account required.
- Carry Card creation.
- Capture loaded conversation context.
- Capture only after explicit user click.

- Structured Injection.
- Inject Summary.
- Inject Full Continuation.
- Copy Fallback.
- Local IndexedDB storage.
- ChatGPT support.
- Claude support.
- Vercel landing site.
- Privacy, Support, Terms, and Pricing pages.
- Chrome extension popup.
- Local install modal when Chrome Store URL is not available.

Disabled Features for This Beta

- Pro upgrades.
- Stripe Checkout.
- Cloud Sync.
- Account Handoff.
- MCP/API access.
- Google OAuth.
- Dev login in production.
- Team features.
- Cross-device sync.
- Paid subscriptions.

---

4. Completed Work

Product Identity

- Product name finalized: **ConvoCarry AI**.
- Tagline finalized: **Carry AI chat context across tools and accounts.**
- “Carry Card” selected as the main product object.
- “Capsule” wording avoided.
- “Structured Injection” selected instead of “Smart Injection”.
- Privacy-first positioning established.

Extension Architecture

- Chrome Manifest V3 structure prepared.
- Minimal permission strategy selected.
- Persistent content scripts avoided.
- Broad host permissions avoided.
- Active user action model selected.
- Capture and injection are triggered only by user clicks.
- Supported beta platforms selected:
- ChatGPT

- Claude

Final Beta Manifest Permissions

The trusted tester beta should only use:

- `activeTab`
- `scripting`
- `storage`

Removed or disabled:

- `identity`
- `downloads`
- `oauth2`
- `<all_urls>`

Local-Only Mode

- Local Free mode chosen as beta default.
- Carry Cards stored locally.
- No account required.
- No remote sync required.
- Offline-friendly core workflow preserved.

Billing and Upgrade Safety

- Stripe Checkout disabled for production beta.
- Pro upgrade flow disabled.
- Upgrade messaging should say:

“Pro upgrades are not enabled in this beta yet.”

Analytics Safety

- Raw Carry Card content should not be sent to analytics.
- `rawSnapshot` should not be sent to analytics.
- Prompt text should not be sent to analytics.
- Conversation text should not be sent to analytics.
- Activation events should track only safe metadata.

Vercel Deployment

- Vercel selected over GitHub Pages.
- Web dashboard/landing site deployed successfully.
- Final live URL:

https://convocarryai.vercel.app/

Live Public URLs

- Homepage: https://convocarryai.vercel.app/
- Privacy Policy: https://convocarryai.vercel.app/privacy
- Support: https://convocarryai.vercel.app/support
- Terms: https://convocarryai.vercel.app/terms
- Pricing: https://convocarryai.vercel.app/pricing

Vercel Build Fixes Completed

- Root `package.json` updated.
- `packageManager` set to pnpm.
- Node engine set.
- `vercel.json` added/updated.
- Vercel build succeeded.
- Deployment succeeded.
- Frontend is publicly accessible.

Chrome Store Drafting

Prepared or updated:

- Chrome Store listing.
- Reviewer instructions.
- Beta tester onboarding.
- Release notes.
- Brand assets document.
- Permission justifications.

Extension ZIP

Generated ZIP path:

apps/extension/.output/convocarryextension-0.1.0-chrome.zip

Latest reported ZIP size:

117.93 kB

---

5. Items That Still Need Final Fix Before Chrome Upload

1. Screenshot Mismatch

Current beta disables:

- Account Handoff.

- Cloud Sync.
- MCP.

Therefore, Chrome Store screenshots must not show these as active beta features.

Do not use these screenshots for the current beta:

- Account Handoff screenshot.
- Cloud Sync screenshot.
- MCP screenshot.

Use only screenshots showing enabled beta features:

1. Dashboard / Carry Cards.
2. Capture only when you click.
3. Structured Injection.
4. Copy Fallback.
5. Privacy / Local Free Mode.

Required action:

- Create or confirm a Copy Fallback screenshot.
- Use Privacy / Local Free Mode screenshot as the fifth screenshot.
- Keep Account Handoff and Cloud Sync/MCP screenshots only for future Pro launch.

---

2. Support Email Must Be Real

Current suggested email:

hello@convocarry.ai

This should only be used if that mailbox is active and receiving emails.

Required action:

- Confirm `hello@convocarry.ai` works.
- If it does not work, replace it with a real working email controlled by the project owner.
- Update the support email everywhere:
- Chrome Store listing.
- Reviewer instructions.
- Beta tester onboarding.
- Release notes.
- Support page.
- Footer.
- Metadata.

---

3. Brand Assets Must Be Clearly Marked as Future Copy

`brand_assets.md` contains future launch wording about:

- Cloud Sync.
- Account Handoff.
- MCP.
- Product Hunt.
- Chrome Store public launch.

Required action:

Add this header:

“Future public launch copy only. Do not use for the current trusted tester beta while Pro features are disabled.”

---

4. Final Rebuild Required

After the screenshot/support email/future-copy fixes, rebuild the extension.

Run:

```
pnpm lint
pnpm typecheck
pnpm build
pnpm --filter @convocarry/extension run zip
```

Required output from Antigravity:

- Final ZIP path.
- ZIP size.
- Final manifest permissions.
- Final screenshot list.
- Final support email used.
- Confirmation no disabled Pro feature screenshots are used.
- Confirmation no `.local` references remain in public-facing files.
- Final PASS/FAIL recommendation.

---

6. Final Chrome Web Store Upload Checklist

Before uploading to Chrome Web Store, confirm:

Package

- ZIP is generated.
- ZIP contains production extension files only.
- No `.env` files.
- No source maps.
- No tests.
- No local credentials.
- No Stripe test keys.
- No dev-login references in production bundle.
- No `eval`.
- No `new Function`.
- No remote hosted JavaScript.
- No persistent content scripts.

Manifest

- Manifest V3.
- Permissions only:
- `activeTab`
- `scripting`
- `storage`
- No `identity`.
- No `downloads`.
- No `<all_urls>`.
- No `oauth2` block.

Store Listing

- Name: ConvoCarry AI.
- Category: Productivity.
- Homepage URL uses Vercel URL.
- Privacy Policy URL uses Vercel URL.
- Support URL uses Vercel URL.
- Support email is real and working.
- Listing says Free beta.
- Listing says Pro upgrades disabled.
- Listing does not overclaim Cloud Sync, Account Handoff, or MCP.
- Affiliation disclaimer included.
- Privacy-first explanation included.

Screenshots

Use 5 screenshots only:

1. Dashboard / Carry Cards.
2. Capture only when you click.
3. Structured Injection.

4. Copy Fallback.
5. Privacy / Local Free Mode.

Each screenshot must be:

- 1280x800.
- Clear.
- Not blurry.
- No real user data.
- No API keys.
- No misleading Pro feature claims.

Reviewer Instructions

Reviewer instructions should explain:

- No login required.
- Local Free mode works.
- How to capture context.
- How to inject summary.
- How to inject full continuation.
- How to use copy fallback.
- Pro features are disabled.
- No background scanning.
- Content is captured only after user action.
- Raw Carry Card content is not sent to analytics.
- Permission justifications.

---

7. Chrome Web Store Submission Plan

Step 1

Open Chrome Web Store Developer Dashboard.

Step 2

Create new item.

Step 3

Upload final ZIP:

apps/extension/.output/convocarryextension-0.1.0-chrome.zip

Step 4

Complete listing:

- Name.
- Short description.
- Full description.
- Category.
- Screenshots.
- Store icon.
- Privacy policy URL.
- Support URL.
- Permission justifications.

Step 5

Set visibility to:

Private / Trusted Tester beta.

Step 6

Add trusted tester Gmail accounts.

Step 7

Submit for review.

---

8. What Not To Do Yet

Do not enable these yet:

- Stripe Checkout.
- Google OAuth.
- Cloud Sync.
- Account Handoff.
- MCP.
- Team plans.
- Public Product Hunt launch.
- Full public Chrome Store launch.
- Paid subscription claims.
- Pro screenshots in Chrome Store beta.

Do not upload if:

- The support email does not work.

- Screenshots show disabled features.
- Manifest includes `identity`.
- Public-facing files still include `.local`.
- Checkout is active in production beta.
- The listing claims Pro features are available.

---

9. After Chrome Trusted Tester Approval

Tester Phase Goals

Collect feedback on:

- Capture reliability.
- Injection reliability.
- ChatGPT adapter.
- Claude adapter.
- Copy fallback usefulness.
- UI clarity.
- Local storage reliability.
- Privacy messaging.
- Chrome permission trust.

Metrics to Watch

- Carry Card created.
- Injection completed.
- Copy fallback used.
- Capture failed.
- Injection failed.
- Upgrade clicked.
- Add to Chrome clicked.
- First-run checklist completed.

Bug Triage Priorities

High priority:

- Capture not working.
- Injection not working.
- Cards not saving.
- Extension crashing.
- Permissions issue.
- Chrome review rejection.

Medium priority:

- UI confusion.
- Copy fallback unclear.
- Screenshot/listing mismatch.
- Onboarding confusion.

Low priority:

- Visual polish.
- Future Pro copy.
- Product Hunt copy.
- Marketing banners.

---

10. Future Phase: Full SaaS / Pro Launch

After local beta validation, build the full SaaS version.

Required Future Work

- Deploy production backend.
- Deploy production database.
- Configure real domain.
- Configure official email.
- Add Google OAuth.
- Restore `identity` permission.
- Enable Cloud Sync.
- Enable Account Handoff.
- Enable MCP/API access.
- Enable Stripe Checkout.
- Configure Stripe webhook.
- Add account dashboard.
- Add billing portal.
- Add Pro entitlement checks.
- Update privacy policy for cloud data.
- Update Chrome Store listing.
- Add Pro screenshots.
- Submit Chrome extension update.

Future Full-Feature Permissions

Possible future permissions:

- `activeTab`
- `scripting`
- `storage`

- `identity`

Only add `identity` when OAuth/sign-in is truly active.

---

11. Current Final Status

Completed

- Product strategy selected.
- Brand direction selected.
- Vercel site deployed.
- Local-only beta architecture prepared.
- Extension ZIP generated.
- Chrome listing drafted.
- Reviewer docs drafted.
- Permission cleanup mostly completed.
- Public URL finalized.

Remaining Before Upload

- Replace Pro-feature screenshots with local-only beta screenshots.
- Confirm real working support email.
- Mark future launch copy clearly.
- Rebuild final ZIP.
- Re-check final manifest.
- Re-check final listing.
- Upload to Chrome Web Store as trusted tester beta.

Final Current Recommendation

Do not upload yet.

Upload after:

- screenshots match enabled beta features,
- support email is real,
- final ZIP is rebuilt,
- final manifest only has `activeTab`, `scripting`, and `storage`.
